

Annual FTE Program Distributions for  
AELS Division 1996 - 2005

*Prepared by the Office of Research  
Teaming to Serve Research Needs of the College  
December 8, 2005*

This report provides ten-year annual FTE graphs for each prefix or program within the AELS Division and for the Division overall.<sup>1</sup> For prefixes that moved to new divisions, effective the current fiscal year, graphs are provided in the “old” and “new” division. Division totals include FTE from prefixes assigned to the division on a year-by year basis only. Each graph shows both a prefix graph (with scale on the left) and an overall Harper graph (with scale on the right). Following the graphs, a table containing FTE values for each prefix is provided. Data were obtained from the Registrar’s Office.

Each graph has 10-year (1996-2005) and 5-year (2001-2005) *standardized beta* coefficients for linear trends reported. Trends significant at the .05 level are followed by \*, trends significant at the .01 level are followed by \*\*, and trends not significantly different from 0 (a horizontal line) are followed by ns. The standardized beta coefficients were obtained from *linear* regression analyses although some of the graphs are clearly not linear. Standardized coefficients were used to allow comparison of coefficients. Standardized beta coefficients range from -1 to +1 with zero indicating enrollment was steady (neither increasing nor decreasing by very much). Negative values indicate downward trends; positive values indicate upward trends.

A significant result indicates the presence of a significant linear component. A non-significant result indicates

either the FTE changed very little from year to year or no linear trend was present.

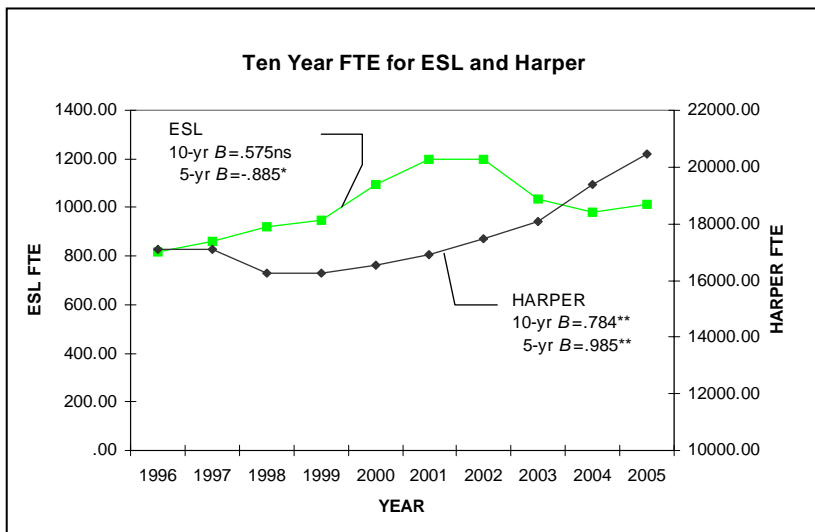

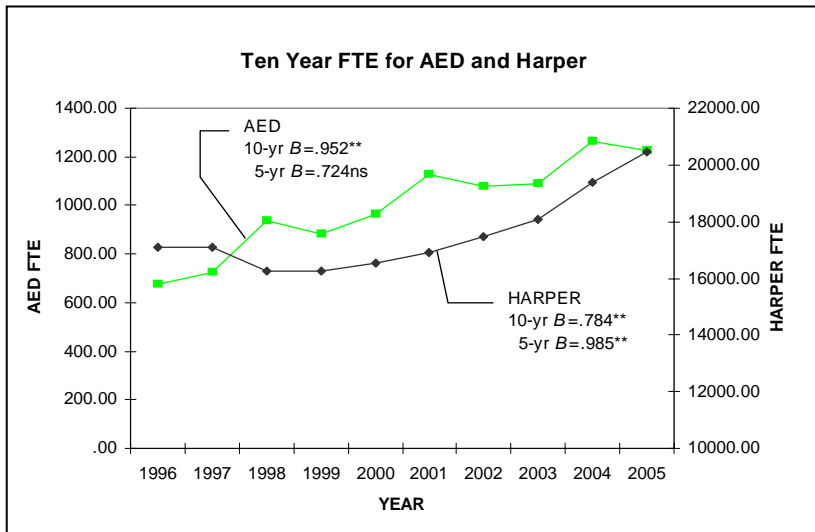

It should be noted that the left vertical axes on the graphs are set to different scales depending on the course prefix annual FTE. What may appear to be a steeper decline on a graph as compared to another graph may not be steeper due to the vertical scale. For example, on page 3 the 10-year graphs for AED and ITP appear to be increasing at a similar rate, but AED is increasing at a faster rate due to the varying scales.

Some general comments related to the graphs are given below:

- The overall 10-year Harper trend and the Harper 5-year trend upward were significant. The AELS 10-year trend was significant but the AELS 5-year trend was not significantly different from 0.
- AED, ITP prefix annual FTE, and the AELS Division graphs had significant 10-year upward trends.
- LNG and SGN exhibited a significant 10-year downward trend.
- ESL exhibited a significant 5-year downward trend, while none of the other prefixes had 5-year coefficients that were significantly different from 0.

---

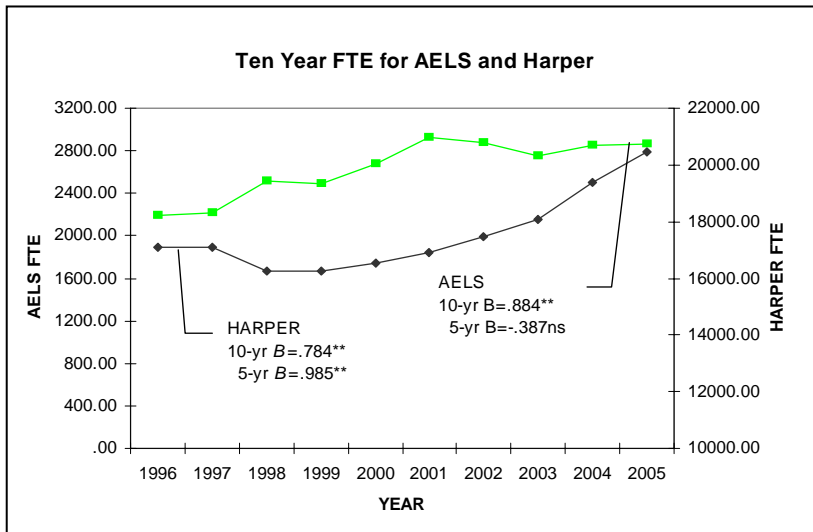

<sup>1</sup> No FTE graph for OCC program due to data for 2005 only.

\*Significant at the .05 level. \*\*Significant at the .01 level.

\*Significant at the .05 level. \*\*Significant at the .01 level.

\*Significant at the .05 level. \*\*Significant at the .01 level.

YEAR	HARPER	AED	ENG098	ESL	ITP	LNG	OCC	PSY106	RDG	SGN	AELS
1996	17086.83	674.87	71.40	815.47	25.60	19.00		161.80	206.40	214.13	2188.67
