

Annual FTE Program Distributions for
LIBERAL ARTS Division 1994 - 2003

Office of Research
December 18, 2003

The following pages provide ten-year annual FTE graphs for each prefix or program within the LIBERAL ARTS Division and for the Division overall. Each graph shows both a prefix graph (with scale on the left) and an overall Harper graph (with scale on the right). Following the graphs, a table containing FTE values for each prefix is provided. Data were obtained from the Registrar's Office.

Each graph has 10-year (1994-2003) and 5-year (1999-2003) *standardized beta* coefficients for linear trends reported. Trends significant at the .05 level are followed by *, trends significant at the .01 level are followed by **, and trends not significantly different from 0 (a horizontal line) are followed by ns. The standardized beta coefficients were obtained from *linear* regression analyses although some of the graphs are clearly not linear. Standardized coefficients were used to allow comparison of coefficients. Standardized beta coefficients range from -1 to +1 with zero indicating enrollment was steady (neither increasing nor decreasing by very much). Negative values indicate downward trends; positive values indicate upward trends.

A significant result indicates the presence of a significant linear component. If the probability of obtaining a beta coefficient different from zero when there was no linear trend was less than .05, the trend line was considered significant. A non-significant result indicates either the FTE changed very little from year to year or no linear trend was present.

It should be noted that the left vertical axes on the graphs are set to different scales depending on the course prefix annual FTE. What may appear to be a steeper decline on a graph as compared to another graph may not be steeper due to the vertical scale.

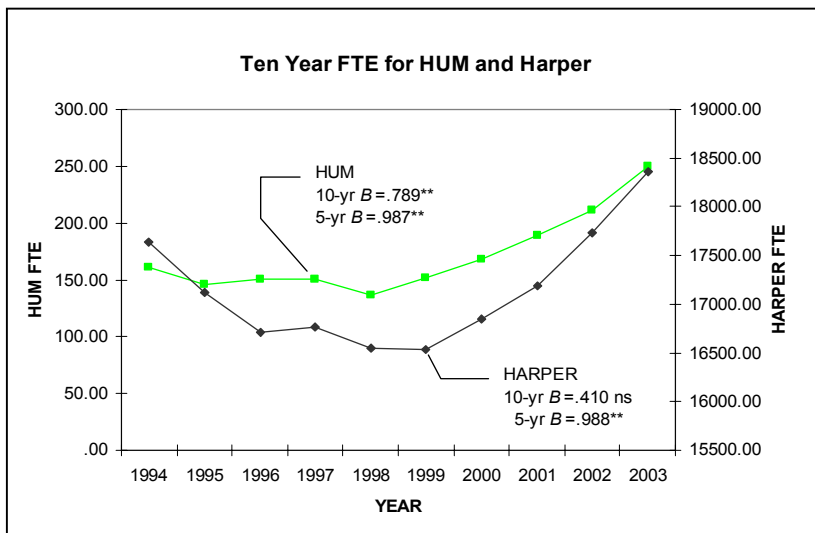

Some general comments related to the graphs are given below:

- The overall 10-year Harper trend was not significant, but the strong 5-year trend upward was significant.
- HUM, IND, and PHI prefix annual FTE graphs had significant 10-year upward trends, and FAS, HUM, PHI, and Liberal Arts Division graphs had significant 5-year upward trends.
- FNA, FRN, GER, and SPA exhibited significant 10-year downward trends.
- Although some of the 5-year standardized beta coefficients appeared large, with the exception of GER, none were significant.

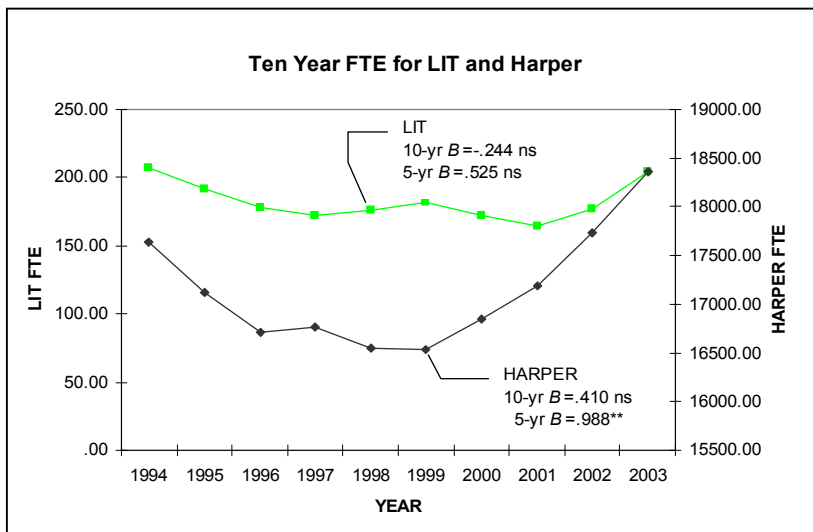

Note: Programs moved from another division are included in the division totals only when they were actually in the division.

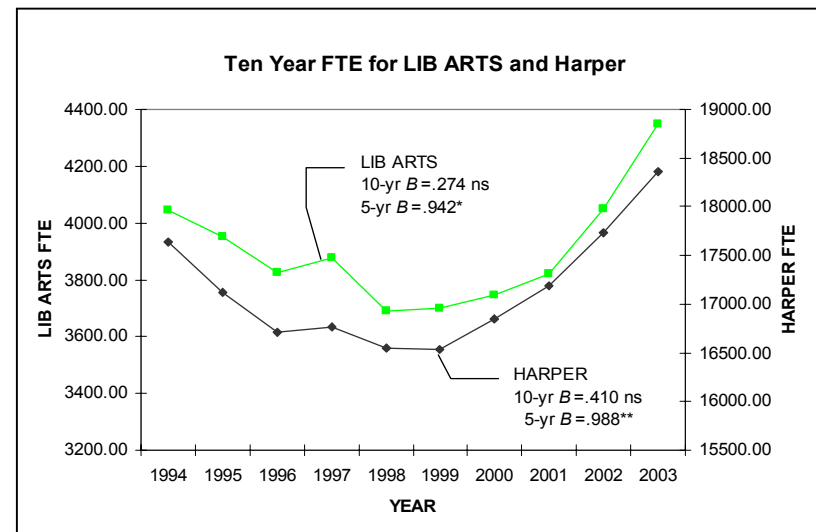

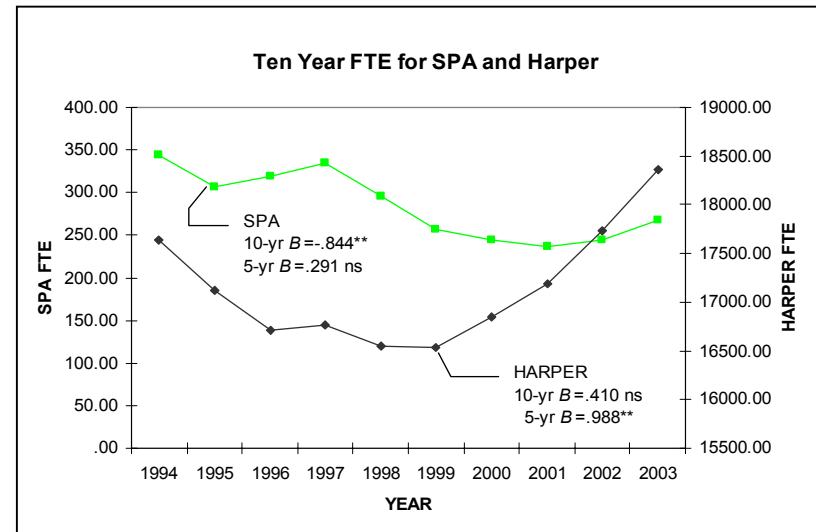

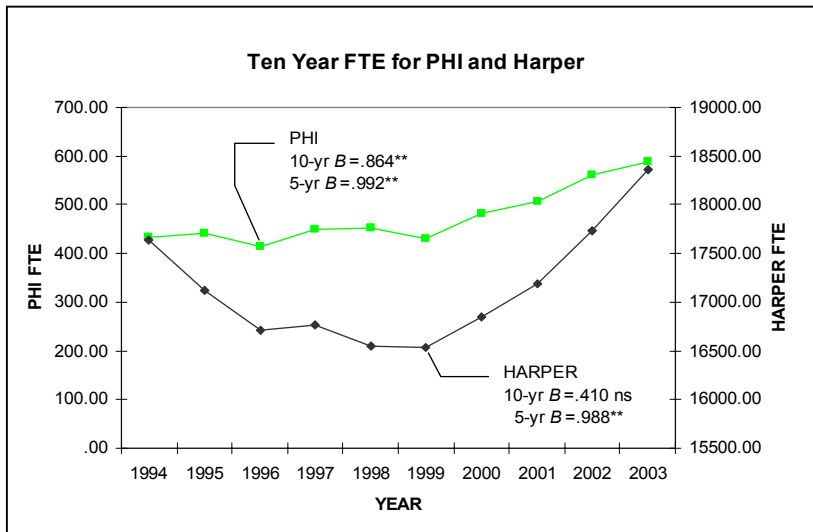

*Significant at the .05 level. **Significant at the .01 level.

*Significant at the .05 level. **Significant at the .01 level.

*Significant at the .05 level. **Significant at the .01 level.

*Significant at the .05 level. **Significant at the .01 level.

YEAR	HARPER	LIBART	ART	ENG	FAS	FNA	FRN	GER	HUM
